

KX140

XY AXIS INKJET PRINTER

- High-definition smart egg inkjet printer, printing pixel 600dpi. The machine comes with an operating screen that can be used, with simple operation, high efficiency and low cost of consumables. It is an egg inkjet printer suitable for small farmers, supermarkets, farmers markets and other customers.
- The machine is composed of body, X-axis moving mechanism, Y-axis moving mechanism, nozzle, control system, etc. It is small and light.
- This machine can spray rich content, such as date, time, expiration date, expiration date, graphics, barcode, QR code, serial number, etc.
- The machine has its own operation screen, which can manually edit the printing information content, which is convenient and fast.
- The machine is equipped with a belt guide device, which has a long service life and is durable.
- The height of the nozzle of the machine can be adjusted according to the product to be printed, and a spring balance device is installed next to the nozzle to prevent collision.
- The machine is not limited to printing eggs, but can also print other products. As long as it is a small-sized product arranged in a dot matrix, it can be printed on the tray.
